

Fiber Optic Reference Guide

Fiber optics play a key role in telecommunications, as well as broadcast and cable systems. Engineers working with fiber optics as well as newcomers to the industry will find this comprehensive, practical guide extremely useful. It will help the reader develop a solid understanding of the underlying principles of the technology as well as essential practical applications. It is presented clearly and with a minimum of jargon, and the text is thoroughly illustrated and indexed. Among the topics covered are: Fundamentals of optical fiber, connectors, splicers, and other components and their applications within systems. Key characteristics and principles of operation for critical electro-optic components such as LEDs, lasers, and detectors. Operation of transmitters, receivers, and fiber optic communications systems. Special emphasis is placed on digital data links and fiber optic video links. David R. Goff is vice president of engineering of Force, Incorporated (Christiansburg, Virginia), an organization specializing in the design and manufacture of a wide range of fiber optic communication devices. Before joining Force, he did instrumentation research at the U.S. Department of Energy and was a fiber optic systems engineer for ITT-EOPD. Prior to that he worked on systems integration and testing for Bell Laboratories. He received his MSEE from Caltech in 1973.

Agradable ruta realizada junto al Bilbao Alpino que parte desde la localidad alavesa de Guinea, en la vertiente Sur de la sierra de Arkamo y que discurre por las cimas de Olvedo, Pelistornes y Cantoblanco.

Desde Guinea el camino es muy evidente, ya que las dos primeras cimas están muy cerca y separadas por un pequeño collado. Su subida es corta y casi directa y está señalizada justo a la salida del pueblo.

Al Olvedo se llega relativamente rápido. A pesar de que las nubes a veces nos impiden apreciar las vistas, el paisaje se intuye precioso.

2017-01-22_10-36-17

Para pasar del Olvedo al Pelistornes tan sólo tenemos que cruzar el collado y llegaremos en apenas 10 minutos a nuestra segunda cima del día.

2017-01-22_10-53-02

Una vez coronadas las cimas anteriores hay que continuar la travesía en dirección a la al Cantoblanco, que se asciende

tras un durillo cortafuegos.

20170122_123405

Desde la cima tenemos justo en frente el Montemayor, máxima altura de la vecina sierra de Arkamo.2017-01-22_13-00-09

Finalmente, iniciamos el descenso hacia la curiosa localidad de Salinas de Añana...

20170122_142807

...donde podremos completar la ruta con una visita a las propias Salinas.

20170122_142812

Una ruta de unos 15 kilómetros sin dificultades reseñables. Únicamente se hace necesaria logística de vehículos. De no tener esta facilidad entonces es mejor realizar únicamente la subida al Olvedo y Pelistornes.

Los Retos de 2017

Publicado el 01/24/2017 por 12meses12montes

Bueno, un nuevo año que ha pasado y uno nuevo que acaba de comenzar. 2016 fue un año muy intenso, si bien los retos que nos marcamos en un principio sólo se vieron cumplidos en una tercera parte. No fue un buen año para ellos, ésta vez la alineación de planetas se generó en pocas ocasiones.

Sin embargo, no decaemos. Cogemos el testigo y no vamos a desistir en su intento, por lo que los retos que no conseguimos cumplir en 2016 serán los que tratemos de realizar en 2017, más algunos otros, a ver qué os parecen. Seguir leyendo
