

Progress in Compound Semiconductor Materials IV - Electronic and Optoelectronic Applications: Volume 829 (MRS Proceedings)

Central to bandgap engineering, or more precisely, wave-function engineering, is the concept that, by spatially varying the composition and doping of semiconductors over distances ranging from a few micrometers down to one monolayer, one can tailor the electronic band structure in a nearly arbitrary and continuous way using epitaxial growth techniques. The objective of this book is to review the progress on interband and intersubband transitions in semiconductors including III-V, IV and II-VI materials and quantum structures, as well as to cover the progress on light sources, detectors, modulators and electronic materials and devices. This book brings together internationally recognized researchers to report on their most recent results and newly gained insights and to provide an up-to-date snapshot of optoelectronics and related fields in 2004/2005. The book covers a wide range of topics spanning opto- and microelectronic materials, growth and synthesis, devices, experimental techniques, modeling tools, and applications. Wavelength ranges span from the UV to the THz, and into the GHz modulation range.

Agradable ruta realizada junto al Bilbao Alpino que parte desde la localidad alavesa de Guinea, en la vertiente Sur de la sierra de Arkamo y que discurre por las cimas de Olvedo, Pelistornes y Cantoblanco.

Desde Guinea el camino es muy evidente, ya que las dos primeras cimas están muy cerca y separadas por un pequeño collado. Su subida es corta y casi directa y está señalizada justo a la salida del pueblo.

Al Olvedo se llega relativamente rápido. A pesar de que las nubes a veces nos impiden apreciar las vistas, el paisaje se intuye precioso.

2017-01-22_10-36-17

Para pasar del Olvedo al Pelistornes tan sólo tenemos que cruzar el collado y llegaremos en apenas 10 minutos a nuestra segunda cima del día.

2017-01-22_10-53-02

Una vez coronadas las cimas anteriores hay que continuar la travesía en dirección a la al Cantoblanco, que se asciende tras un durillo cortafuegos.

20170122_123405

Desde la cima tenemos justo en frente el Montemayor, máxima altura de la vecina sierra de Arkamo.2017-01-22_13-00-09

Finalmente, iniciamos el descenso hacia la curiosa localidad de Salinas de Añana...

20170122_142807

...donde podremos completar la ruta con una visita a las propias Salinas.

20170122_142812

Una ruta de unos 15 kilómetros sin dificultades reseñables. Únicamente se hace necesaria logística de vehículos. De no tener esta facilidad entonces es mejor realizar únicamente la subida al Olvedo y Pelistornes.

Los Retos de 2017

Publicado el 01/24/2017 por 12meses12montes

Bueno, un nuevo año que ha pasado y uno nuevo que acaba de comenzar. 2016 fue un año muy intenso, si bien los retos que nos marcamos en un principio sólo se vieron cumplidos en una tercera parte. No fue un buen año para ellos, ésta vez la alineación de planetas se generó en pocas ocasiones.

Sin embargo, no decaemos. Cogemos el testigo y no vamos a desistir en su intento, por lo que los retos que no conseguimos cumplir en 2016 serán los que tratemos de realizar en 2017, más algunos otros, a ver qué os parecen. Seguir leyendo
