

PCR/RT- PCR in situ: Light and Electron Microscopy (Methods in Visualization)

Although the polymerase chain reaction has revolutionized genetic analysis by amplifying rare nucleic acid sequences, the in situ application is the only method that allows the localization of amplified signal within tissue structure. The applications of in situ polymerase chain reaction have greatly enhanced the field of investigation in many disciplines, including viral infections, gene modification, tumor diagnosis, gene therapy, and cellular distribution of rare mRNA copies. PCR/RT-PCR in situ: Light and Electron Microscopy covers methods of in situ polymerase chain reaction (PCR) and reverse transcription PCR (RT-PCR), two new approaches in visualizing very low amounts of DNA and RNA in tissues and cell cultures at the light and electron microscopy levels. Written by experts in this field, the book provides theoretical consideration, as well as practical approaches to in situ PCR. The authors provide detailed protocols for each step, including the preparation of tissue samples, the rationale for the design of primers and revelation. They also emphasize the need for appropriate controls to meet the requirements of in situ PCR and RT-PCR specificity. Organized in a user-friendly two-column format, this book will provide you with tools necessary to perform and optimize these sensitive and powerful techniques in your research protocols.

Agradable ruta realizada junto al Bilbao Alpino que parte desde la localidad alavesa de Guinea, en la vertiente Sur de la sierra de Arkamo y que discurre por las cimas de Olvedo, Pelistornes y Cantoblanco.

Desde Guinea el camino es muy evidente, ya que las dos primeras cimas están muy cerca y separadas por un pequeño collado. Su subida es corta y casi directa y está señalizada justo a la salida del pueblo.

Al Olvedo se llega relativamente rápido. A pesar de que las nubes a veces nos impiden apreciar las vistas, el paisaje se intuye precioso.

2017-01-22_10-36-17

Para pasar del Olvedo al Pelistornes tan sólo tenemos que cruzar el collado y llegaremos en apenas 10 minutos a nuestra segunda cima del día.

2017-01-22_10-53-02

Una vez coronadas las cimas anteriores hay que continuar la travesía en dirección a la al Cantoblanco, que se asciende tras un durillo cortafuegos.

20170122_123405

Desde la cima tenemos justo en frente el Montemayor, máxima altura de la vecina sierra de Arkamo.2017-01-22_13-00-09

Finalmente, iniciamos el descenso hacia la curiosa localidad de Salinas de Añana...

20170122_142807

...donde podremos completar la ruta con una visita a las propias Salinas.

20170122_142812

Una ruta de unos 15 kilómetros sin dificultades reseñables. Únicamente se hace necesaria logística de vehículos. De no tener esta facilidad entonces es mejor realizar únicamente la subida al Olvedo y Pelistornes.

Los Retos de 2017

Publicado el 01/24/2017 por 12meses12montes

Bueno, un nuevo año que ha pasado y uno nuevo que acaba de comenzar. 2016 fue un año muy intenso, si bien los retos que nos marcamos en un principio sólo se vieron cumplidos en una tercera parte. No fue un buen año para ellos, ésta vez la alineación de planetas se generó en pocas ocasiones.

Sin embargo, no decaemos. Cogemos el testigo y no vamos a desistir en su intento, por lo que los retos que no conseguimos cumplir en 2016 serán los que tratemos de realizar en 2017, más algunos otros, a ver qué os parecen. Seguir leyendo
