

In Search of Unity: The Greatest Puzzle of Science

Albert Einstein once wrote: The supreme task of the physicist is to arrive at those universal laws from which the cosmos can be built up by pure deduction. Remarkably, in this book we arrive at those universal axioms from which universal science can be built up by pure deduction. Within the prevailing paradigm of science the mathematical philosophy of nature we show it is not possible to unify science. To overcome this limitation we introduce a new, more general paradigm. Since the new paradigm is a generalisation of the mathematical philosophy of nature, we are able to retain the mathematical knowledge built up within the prevailing paradigm. Within the new paradigm we introduce four empirical universal axioms, from which we deduce that it is not possible to mathematically unify the two fundamental theories of physics quantum theory and general relativity. Instead, from the universal axioms we logically deduce the first symmetry of nature, the first invariance of nature, the universal Arrow of Time, the universal laws of nature, and the three universal dynamic theories of nature quantum theory, general relativity and universal evolution. The first symmetry of nature and first invariance of nature arise from the constancy of the universal laws of nature not only being a symmetry, but a unifying symmetry. The biological view of universal evolution provides a new theory of biological evolution that replaces what we show is the deficient neo-Darwinian synthesis. In a similar way, theories of evolution in all the sciences are based on their respective views of universal evolution. From the universal axioms, we deduce the universal features of nature thereby unifying physics, chemistry, biology, psychology, sociology, economics and all of science. This book is written for scientifically-inclined general readers, teachers, students, scientists, philosophers, physicists, chemists,

biologists, psychologists, sociologists, and economists.

Agradable ruta realizada junto al Bilbao Alpino que parte desde la localidad alavesa de Guinea, en la vertiente Sur de la sierra de Arkamo y que discurre por las cimas de Olvedo, Pelistornes y Cantoblanco.

Desde Guinea el camino es muy evidente, ya que las dos primeras cimas están muy cerca y separadas por un pequeño collado. Su subida es corta y casi directa y está señalizada justo a la salida del pueblo.

Al Olvedo se llega relativamente rápido. A pesar de que las nubes a veces nos impiden apreciar las vistas, el paisaje se intuye precioso.

2017-01-22_10-36-17

Para pasar del Olvedo al Pelistornes tan sólo tenemos que cruzar el collado y llegaremos en apenas 10 minutos a nuestra segunda cima del día.

2017-01-22_10-53-02

Una vez coronadas las cimas anteriores hay que continuar la travesía en dirección a la al Cantoblanco, que se asciende tras un durillo cortafuegos.

20170122_123405

Desde la cima tenemos justo en frente el Montemayor, máxima altura de la vecina sierra de Arkamo.2017-01-22_13-00-09

Finalmente, iniciamos el descenso hacia la curiosa localidad de Salinas de Añana...

20170122_142807

...donde podremos completar la ruta con una visita a las propias Salinas.

20170122_142812

Una ruta de unos 15 kilómetros sin dificultades reseñables. Únicamente se hace necesaria logística de vehículos. De no tener esta facilidad entonces es mejor realizar únicamente la subida al Olvedo y Pelistornes.

Los Retos de 2017

Publicado el 01/24/2017 por 12meses12montes

Bueno, un nuevo año que ha pasado y uno nuevo que acaba de comenzar. 2016 fue un año muy intenso, si bien los retos que nos marcamos en un principio sólo se vieron cumplidos en una tercera parte. No fue un buen año para ellos, ésta vez la alineación de planetas se generó en pocas ocasiones.

Sin embargo, no decaemos. Cogemos el testigo y no vamos a desistir en su intento, por lo que los retos que no

conseguimos cumplir en 2016 serán los que tratemos de realizar en 2017, más algunos otros, a ver qué os parecen. Seguir leyendo
