

Christmas Tree Space Sails. Volume 32.

In Volume 32, we consider theoretical general relativistic modifications to the Christmas Tree Sails contemplated in previous volumes in this series. More specifically we explore ad-hoc but abstractly formulated transfer of orbital angular momentum associated with various species of superchiral radiation including but not limited to photons, gravitational waves, and even provisionally, neutrino sources of energy. The electromagnetic and neutrino sources are assumed to come in both Standard Model and Mirror Matter Model forms. Additionally, we explore solutions particular to uncharged and charged non-rotating differential masses modeled to be spherical, and uncharged and charged rotating differential masses modeled to be spherical for which said masses are considered collectively to comprise a spacecraft and sail of arbitrary shape, size, and mass density profile. Such general relativistic treatment becomes necessary for cases where a spacecraft and light-sail such as the ones conjectured to their extremes in this series approach densities for which gravitational flux emanating from these spacecraft systems approaches that of stellar white dwarfs. These corrections are necessary because at the extreme relativistic Lorentz factors proposed for spacecraft performance, a slight energy imbalance and miscalculation can result in mission failure and spacecraft obliteration in a near instant. The attractive winter scene depicted on the front cover it true to the Christmas spirit as the holidays of multiple prominent faiths come and pass near years end. Space sailing can be fun and awesomely celebratory as we contemplate travel amongst the stars and galaxies in a bold future unbounded with opportunities for eternal exploration and evolution in charity.

Agradable ruta realizada junto al Bilbao Alpino que parte desde la localidad alavesa de Guinea, en la vertiente Sur de la sierra de Arkamo y que discurre por las cimas de Olvedo, Pelistornes y Cantoblanco.

Desde Guinea el camino es muy evidente, ya que las dos primeras cimas están muy cerca y separadas por un pequeño collado. Su subida es corta y casi directa y está señalizada justo a la salida del pueblo.

Al Olvedo se llega relativamente rápido. A pesar de que las nubes a veces nos impiden apreciar las vistas, el paisaje se intuye precioso.

2017-01-22_10-36-17

Para pasar del Olvedo al Pelistornes tan sólo tenemos que cruzar el collado y llegaremos en apenas 10 minutos a nuestra segunda cima del día.

2017-01-22_10-53-02

Una vez coronadas las cimas anteriores hay que continuar la travesía en dirección a la al Cantoblanco, que se asciende tras un durillo cortafuegos.

20170122_123405

Desde la cima tenemos justo en frente el Montemayor, máxima altura de la vecina sierra de Arkamo.2017-01-22_13-00-09

Finalmente, iniciamos el descenso hacia la curiosa localidad de Salinas de Añana...

20170122_142807

...donde podremos completar la ruta con una visita a las propias Salinas.

20170122_142812

Una ruta de unos 15 kilómetros sin dificultades reseñables. Únicamente se hace necesaria logística de vehículos. De no tener esta facilidad entonces es mejor realizar únicamente la subida al Olvedo y Pelistornes.

Los Retos de 2017

Publicado el 01/24/2017 por 12meses12montes

Bueno, un nuevo año que ha pasado y uno nuevo que acaba de comenzar. 2016 fue un año muy intenso, si bien los retos que nos marcamos en un principio sólo se vieron cumplidos en una tercera parte. No fue un buen año para ellos, ésta vez la alineación de planetas se generó en pocas ocasiones.

Sin embargo, no decaemos. Cogemos el testigo y no vamos a desistir en su intento, por lo que los retos que no conseguimos cumplir en 2016 serán los que tratemos de realizar en 2017, más algunos otros, a ver qué os parecen. Seguir leyendo
