

Frequency Control of Semiconductor Lasers (Wiley Series in Microwave and Optical Engineering)

Edited by a pioneer in the field, Frequency Control of Semiconductor Lasers explores the principles and practices of frequency control as they apply to semiconductor lasers. In order to provide the most authoritative coverage of this rapidly progressing technology, Professor Ohtsu has enlisted the expertise of ten of the worlds leading experts. Together they provide a wide range of critically important studies and research results that will help establish design criteria for coherent semiconductor laser devices and high-gain/wideband frequency control systems, as well as provide inspiration for new applications. Studies included in this volume cover: Device structure and performance levels required for a single-mode operation with a narrow field spectral linewidth Near-infrared molecular spectroscopy for developing reliable frequency references Accurate atomic spectroscopy in the visible region with applications to frequency control of semiconductor lasers Analysis of a special device for phase modulation Measuring the frequency of frequency-controlled lasers Optical frequency standards for optical communications systems Application of an optical communications system using frequency- controlled lightwaves The latest addition to the Wiley Series in Microwave and Optical Engineering, Frequency Control of Semiconductor Lasers offers a unique tutorial resource for researchers, systems design engineers, and others involved in the development of new laser applications.

Agradable ruta realizada junto al Bilbao Alpino que parte desde la localidad alavesa de Guinea, en la vertiente Sur de la sierra de Arkamo y que discurre por las cimas de Olvedo, Pelistornes y Cantoblanco.

Desde Guinea el camino es muy evidente, ya que las dos primeras cimas están muy cerca y separadas por un pequeño collado. Su subida es corta y casi directa y está señalizada justo a la salida del pueblo.

Al Olvedo se llega relativamente rápido. A pesar de que las nubes a veces nos impiden apreciar las vistas, el paisaje se intuye precioso.

2017-01-22_10-36-17

Para pasar del Olvedo al Pelistornes tan sólo tenemos que cruzar el collado y llegaremos en apenas 10 minutos a nuestra

segunda cima del día.

2017-01-22_10-53-02

Una vez coronadas las cimas anteriores hay que continuar la travesía en dirección a la al Cantoblanco, que se asciende tras un durillo cortafuegos.

20170122_123405

Desde la cima tenemos justo en frente el Montemayor, máxima altura de la vecina sierra de Arkamo.2017-01-22_13-00-09

Finalmente, iniciamos el descenso hacia la curiosa localidad de Salinas de Añana...

20170122_142807

...donde podremos completar la ruta con una visita a las propias Salinas.

20170122_142812

Una ruta de unos 15 kilómetros sin dificultades reseñables. Únicamente se hace necesaria logística de vehículos. De no tener esta facilidad entonces es mejor realizar únicamente la subida al Olvedo y Pelistornes.

Los Retos de 2017

Publicado el 01/24/2017 por 12meses12montes

Bueno, un nuevo año que ha pasado y uno nuevo que acaba de comenzar. 2016 fue un año muy intenso, si bien los retos que nos marcamos en un principio sólo se vieron cumplidos en una tercera parte. No fue un buen año para ellos, ésta vez la alineación de planetas se generó en pocas ocasiones.

Sin embargo, no decaemos. Cogemos el testigo y no vamos a desistir en su intento, por lo que los retos que no conseguimos cumplir en 2016 serán los que tratemos de realizar en 2017, más algunos otros, a ver qué os parecen. Seguir leyendo
